

# The Bassin Center for Facial Plastic Surgery...

*...Featuring Non-Surgical Cosmetic Treatments to Enhance Your Life*

**Roger Bassin, M.D.**

Between jobs, kids, and all your other responsibilities, is it really possible to find the time to rejuvenate your appearance? The short answer is YES. According to Roger Bassin, M.D., a board-certified eyelid and facial plastic surgeon experienced in all types of facial enhancement, the latest non-invasive treatments are quick to perform, offer rapid recovery ... and deliver results that last much longer than you might expect!

Dr. Bassin has been featured on ABC, CBS and NBC, locally and nationally, as well as in nationally-distributed magazines such as Allure, to discuss new breakthroughs in facial enhancement. One of the most favored treatments at his busy practice is the non-surgical facelift, ThermaCool TC®.

## The Basics of ThermaCool

The ThermaCool procedure itself takes less than an hour, is virtually pain free and requires no downtime. ThermaCool is not a laser technique. It employs a concentrated beam of radio-frequency waves to heat the dermis, a deep portion of the skin previously unreachable by noninvasive treatments. ThermaCool shrinks the collagen under the skin, immediately tightening the targeted area. At the same time, ThermaCool stimulates the production of new collagen which imparts long-lasting improvement. Lines and wrinkles continue to diminish over the next 4 - 6 months as new, tight collagen is formed. Dr. Bassin believes that the heat penetrates enough to target and dissolve some fat cells, as well, particularly in chin and neck areas. He says results of ThermaCool TC® should last 5-10 years.
